UTAH'S EMPLOYMENT SUMMARY: MAY 2013

SALT LAKE CITY— Utah's nonfarm payroll employment for May 2013 grew by an estimated 2.6 percent, adding 32,600 jobs to the economy as compared to May 2012. Utah's current employment level registers 1,282,700.

The May seasonally adjusted unemployment rate measured 4.6 percent, having fallen one tenth from April. Approximately 63,400 individuals were unemployed and actively seeking work. The national unemployment rate increased slightly to 7.6 percent in the same month.

While continuing to add jobs, the labor market in Utah experienced the lowest rate of year over growth thus far in 2013. However, the current year trend of job, employment, and labor force expansion continued over the month. The number of employed and the overall labor force size increased, and the labor force participation rate, which measures the share of noninstitutionalized civilian population who are employed or actively seeking work, registered an increase of roughly three tenths of a percentage point. The number of employed individuals increased by approximately 8,700 from April to May.

Of the eleven industry groups observed, nine posted year-over employment gains. The largest gains were in Trade, Transportation and Utilities (10,900 jobs), Professional and Business Services (7,400 jobs) and Leisure and Hospitality (4,200 jobs). The Natural Resources and Mining industry showed no change compared to May of 2012 and the Government sector lost approximately 5,200 jobs in that same time frame.

Note: Numbers have been left unrounded for convenience rather than to denote accuracy.

Note: Employment numbers are not seasonally adjusted. Therefore, comparisons of employment levels from one month to the next should not be used as job creation/loss estimates between those months. Seasonal factors could be the reason. For example, employment levels in September are usually higher than in August, as school employment resumes.
